

Yet another task manager (Tasky) from TeleSoftas is multiplatform application for Symbian phones. It resembles the best features of famous tools like Swither and FExplorer. You can do process and thread management plus RAM usage monitoring. Short control button description:

- Add to watch  
add thread or process to the watch section (allows to monitor RAM usage for this thread or process)
- Tools
  - Kill Kill thread or process
  - Reboot Reboot the device
- Memory
  - Fill memory Fills memory
  - Compress Compresses memory
- Show
  - Threads shows threads
  - Processes shows running processes
  - RAM shows RAM usage for threads or processes
  - PID shows PID of the processes
  - UID shows UID of the threads or processes
- About  
Shows about dialog
- Exit  
Exit application

Tasky supports the following operating systems and UI brands:

Operating system	UI brand
Symbian OS 6.1	Series60
Symbian OS 7.0	UIQ
Symbian OS 7.0s	Series60 Series80 Series90
